**Abstract:**

The paper presents the HERMES specification language, which is introduced scripts for complex activities involving coordination and collaboration. The I part of a framework for network-centric applications, providing a two-level expressing metadata. Service flow rules define communication channels bet components and actions triggered by run time events. The semantics of HERMES a model for dynamic and adaptive work sessions in open environments.

**Index Terms:**

specification languages; work session specification; HERMES specification language; scripts; complex activities; coordination; collaboration; network-centric applications; two-level framework; metadata; service flow rules; communication channel components; run time events; adaptive work sessions; open environments
